Vorwort.

Einer Anregung des leider zu früh heimgegangenen Geheimraths VICTOR MEYER folgend, habe ich im Jahre 1889 es unternommen, meine im Jahre 1883 erschienenen „Tabellen der Kohlenstoffverbindungen“ einer Neubearbeitung zu unterziehen.

Die anfangs gehegte Hoffnung, diese Arbeit in einigen wenigen Jahren bewältigen zu können, erwies sich indessen als trügerisch. Schon allein die umfangreichen Vorarbeiten, welche überdies im Jahre 1892 infolge des Beschlusses der Genfer Nomenklatur-Commission hinsichtlich der Benennung der aliphatischen Kohlenwasserstoffe eine recht zeitraubende Umarbeitung nöthig machten, ferner die in der neueren Literatur aller Kulturvölker aufgespeicherte gewaltige Fülle neuer Thatsachen, als Resultate der ernsten Arbeit unserer Fachgenossen, sowie endlich auch meine Thätigkeit im Dienste der Industrie, die den grösseren Theil meiner Zeit in Anspruch nahm — diese drei Umstände gestatteten mir nicht, früher mit der fertigen Arbeit an die Oeffentlichkeit zu treten.

Preface.

On the suggestion of Prof. VICTOR MEYER whose premature death we all lament, I undertook in 1889 to prepare a new edition of my "Tables of Carbon Compounds" which appeared in 1883.

The hope I at first entertained of being able to accomplish this task in a few years, could however not be realised. The following circumstances prevented me from laying the complete work before the public at an earlier date, namely first of all the extensive preliminary work which on account of the Geneva commission concerning the nomenclature, of the aliphatic hydrocarbons, in 1892 necessitated extensive alterations, secondly the enormous number of new facts which have been brought to light through the arduous labors of our fellow-workers and which have swelled the present literature of all civilised nations, and lastly my duties in the service of chemical industry which occupied the greater part of my time.

Avant-Propos.

A l'instigation de VICTOR MEYER, malheureusement trop tôt décédé, j'ai entrepris en 1889 de soumettre à un remaniement complet mes «Tables des combinaisons du Carbone» paru en 1883.

J'avais tout d'abord compté effectuer cette tâche en peu d'années, mais cette espérance ne put se réaliser. Un travail considérable est résulté d'une part: des résolutions que le congrès de nomenclature réuni à Genève en 1892, a pris au point de vue des hydrocarbures aliphatiques, d'autre part du nombre énorme de nouveaux résultats obtenus par nos collègues de tous les pays civilisés. En fin, l'activité qu'il me fallut mettre au service de l'industrie m'a pris, à cette époque, la majeure partie de mon temps. C'est pour ces trois raisons qu'il me fut impossible de livrer plus tôt à la publicité l'ouvrage que j'avais entrepris et c'est au bout de dix ans d'un travail assidu, que l'oeuvre fut enfin achevée.

Prefazione.

Questa nuova edizione delle mie „Tabelle dei composti del Carbonio“ pubblicate nel 1883 fu da me intrapresa nel 1889 seguendo il consiglio del rimpianto VITTORIO MEYER.

La speranza, che io aveva dapprima concepito, di poter condurre a termine questo lavoro in pochi anni rimase delusa. Diverse circostanze mi impedirono di compiere e di pubblicare prima d'ora quest' opera. Anzitutto molto tempo richiesero i vastissimi lavori preliminari; inoltre nel 1892 le conclusioni della Commissione di Ginevra sulla nomenclatura degli idrocarburi alifatici, mi costrinsero, con gran perdita di tempo, al rimaneggiamento del lavoro già fatto. A ciò si aggiunga la prodigiosa copia di fatti nuovi che l'intensa attività dei chimici accumulò nella recente letteratura scientifica di tutte le nazioni civili. In fine le mie occupazioni industriali mi assorbivano la maggior parte del tempo.

Die Vollendung derselben erforderte bei emsiger Thätigkeit einen Zeitraum von beinahe zehn Jahren.

Wie das seit 1883 bis 1889 aufgehäuften und zu bewältigende Material mir unter den Händen gewachsen ist, wie dann noch Tag für Tag der Literaturstrom nachdrängte, das ist aus der Thatsache zu ersehen, dass die Gesamtzahl der registrierten Verbindungen sich heute auf etwa vierundsiebzig Tausend beziffert — gegen nur zwanzig Tausend im Jahre 1883.

Die Umänderung des Titels „Tabellen der Kohlenstoffverbindungen“ in:

„Lexikon der Kohlenstoffverbindungen“

habe ich vorgenommen, weil die Bezeichnung „Tabellen“ naturgemäss zu irrigen Meinungen über den Inhalt und den Umfang des Werkes führen müsste.

Die Anordnung des Stoffes und die Art der Registrirung ist mit einer ganz unwesentlichen Abweichung — siehe die „Einleitung“ — die gleiche geblieben.

Dem Wunsche des Herrn Geheimrath Professor BEILSTEIN nach Ergänzung des Werkes durch Aufnahme der procentualen Zusammensetzung gewisser Formeltypen ist Rechnung getragen durch die Ausdehnung der Procenttabellen auf die Formen CHO — CHN und CHON, insgesamt auf etwa 20 000 Formeln. Wie diese Erweiterung sich als nützlich erweisen soll, so hoffe ich auch, durch die Beifügung der „Beilstein-Notiz“ die Zustimmung der Fachgenossen zu finden.

In spite of assiduous labor, the completion of this work has taken nearly ten years.

How the material I had to master and which had accumulated between 1883—1889, has grown under my hands, and how, besides, the stream of literature has pressed on day by day, will be seen from the fact that the total number of the registered compounds amounts to day to about 74 thousand, as compared with 20 thousand which were known in the year 1883.

I have altered the title “Tables of carbon compounds” to:

„*Lexicon of carbon compounds*“

because the word “tables” would naturally lead to an erroneous view as to the contents and the extent of the work.

The arrangement of the material and the manner of registering it remained the same with the exception of quite an unessential point (see the “Introduction”).

I have carried out Prof. BEILSTEIN's desire to supply the work with the percentage composition of certain types, and therefore I have extended the tables of percentages to the forms CHO, CHN and CHON, altogether to about 20 000 formulae. As this expansion is intended to be useful I hope to receive the consent of fellow-workers to the introduction of the addition of references to BEILSTEIN's handbook.

Comme de 1883 à 1889 un matériel énorme s'est accumulé sous mes mains, comme chaque jour depuis lors, la bibliographie a augmenté, il n'est pas surprenant que l'ensemble des combinaisons enregistrées, qui comprenait 20 mille corps en 1883, se soit élevé aujourd'hui à 74 mille environ.

Au titre primitif «Tables des combinaisons organiques» j'ai substitué celui de:

«Dictionnaire des combinaisons du Carbone»

ayant jugé que la dénomination de «Tables» pouvait conduire à une fausse interprétation du contenu et de l'étendue du travail.

A peu de chose près, l'arrangement de la matière et le mode d'inscription des combinaisons sont restés les mêmes (voir l'introduction).

Pour accéder au désir de Monsieur le Professeur BEILSTEIN, j'ai ajouté la composition centésimale pour certains types de formules et étendu les tables des pour cents aux formes CHO, CHN et CHON soit sur un ensemble de 20000 formules environ, pensant que cela rendrait service. J'espère aussi que l'adjonction de la „Beilstein-Notiz“ (Annotation qui renvoie au traité de BEILSTEIN), obtiendra l'assentiment de mes collègues.

Il compimento dell' opera richiese così circa dieci anni di indefesso lavoro.

Dell' enorme accrescimento subito dal materiale fra il 1883 ed il 1889, e dello sviluppo preso frattanto dalla letteratura chimica, si avrà un concetto ove si consideri che mentre la prima edizione conteneva 20 mila composti, il numero di quelli registrati nella presente ammonta a circa 74 mila.

Io ho cambiato il titolo „Tabelle dei composti del Carbonio“ in quello:

„Dizionario dei composti del carbonio“

perchè il nome di „Tabelle“ poteva naturalmente dare un concetto erroneo sull' indole e sulla mole dell' opera.

L'ordine della materia e la sua distribuzione, salvo insignificanti modificazioni, — vedi Introduzione — è rimasto quello di prima.

Ho voluto tener conto di un desiderio dell' illustre Prof. BEILSTEIN aggiungendo, a completamento dell' opera, le tavole della composizione percentuale di determinati tipi di formole, coll' estendere le tabelle della percentuali alle forme CHO, CHN, e CHON; in complesso a circa 20000 formole. Come dovrà mostrarsi utile questo ampliamento, così spero di incontrare l'approvazione dei chimici per l'aggiunta fatta del „richiamo al BEILSTEIN“.

Pendant la rédaction de ce dictionnaire, la „Beilstein-Notiz“ m'a servi de guide et m'a rendu de si grands services que les doutes que j'avais conçus au début sur l'utilité de ce surcroît de travail, ont été complètement dissipés.

Questo „richiamo al BEILSTEIN“ mi fu, nella compilazione di questo Dizionario, di tale giovamento, come guida per le tortuose ed intricate vie della nostra scienza, che mi sono ricreduto della mia prima opinione d'aver fatto inutilmente un maggior lavoro.

Einleitung, System und Nomenklatur.

Einleitung.

Das der ersten Auflage dieses Werkes* zu Grunde gelegte System ist — mit einer ganz unwesentlichen Aenderung, die den praktischen Gebrauch kaum berührt — auch für diese Auflage in Anwendung gekommen und möge noch einmal kurz erläutert werden.

Das Alphabet des Systems oder die Reihenfolge der mit dem Kohlenstoff verbundenen Elemente, geordnet nach ihrer Häufigkeit, ist folgende:

- 1) **H, O, N; Cl, Br, J, F; S, P**
- 2) Alle übrigen Elemente, alphabetisch geordnet **A—Z**.

Die Anordnung richtet sich nach der Atomzahl des Kohlenstoffs, und in zweiter Linie nach der Anzahl der neben Kohlenstoff vorhandenen Elemente.

Die Folge der einzelnen Elemente geschieht in horizontaler und vertikaler Richtung mit steigender Atomzahl.

Introduction.

The system which was used in the first edition of this work* has also been adopted in this edition, with the exception of quite an unessential alteration which scarcely touches its practical application. I will give again a brief exposition of this system.

The alphabet of the system of the succession of the elements combined with carbon, as determined by the frequency of their occurrence, is as follows:

- 1) **H, O, N; Cl, Br, J, F; S, P**
- 2) All the other elements are placed in alphabetical order: **A—Z**.

The arrangement depends first on the number of carbon atoms, and secondly on the number of elements which in addition to carbon are contained in the compounds.

The elements follow each other in horizontal and vertical rows according to the number of atoms.

* Unter dem Titel: „Tabellen der Kohlenstoffverbindungen“ von M. M. Richter. — Berlin 1884. R. Oppenheim.

* Under the title: “Tables of carbon compounds“ by M. M. Richter. — Berlin 1884. R. Oppenheim.

Introduction.

Le système exposé dans la première édition de cet ouvrage* et qui se trouve reproduit ici avec des modifications insignifiantes, nécessite quelques éclaircissements indispensables.

L'ordre du système, ou si l'on veut la succession par ordre d'importance des éléments combinés au Carbone, est la suivante:

- 1) **H, O, N; Cl, Br, J, F; S, P**
- 2) Tous les autres corps simples d'après l'ordre alphabétique **A—Z**.

Cet arrangement se base, 1^o: sur le nombre d'atomes de carbone; 2^o sur le nombre des autres éléments.

La succession des éléments a lieu horizontalement et verticalement dans l'ordre croissant du nombre d'atomes.

Introduzione.

Il sistema che ha servito di base alla prima edizione di quest' opera* sarà seguito anche in questa — con modificazioni affatto insignificanti che non riguardano quasi punto l'uso pratico — come verrò qui esponendo brevemente.

L'alfabeto del sistema, vale a dire l'ordine con cui si susseguono gli elementi uniti al carbonio, tenuto conto della loro relativa frequenza, è il seguente:

- 1) **H, O, N; Cl, Br, J, F; S, P.**
- 2) tutti gli altri elementi in ordine alfabetico dall' **A** alla **Z**.

L'ordinamento dipende dal numero degli atomi di Carbonio, e secondariamente dal numero degli elementi con esso combinati.

I singoli elementi si susseguono in direzione orizzontale e verticale col crescere del numero dei loro atomi.

* Sous le titre: „Tabellen der Kohlenstoffverbindungen von M. M. Richter. — Berlin 1884. R. Oppenheim.

* Sotto il titolo „Tabelle dei composti del carbonio“ di M. M. Richter. — Berlin 1884. R. Oppenheim.

Eine Verbindung $C_{13}H_{17}O_2N$ beispielsweise ist in der „ C_{13} -Gruppe mit drei Elementen“ zu suchen.

Die Anordnung ist — weil automatisch — so einfach, dass sie sich beim Ueberschauen der einzelnen Gruppen, z. B. der C_8 -Gruppen, als fast selbstverständlich ergibt:

For example a compound $C_{13}H_{17}O_2N$ is to be looked for in the C_{13} -group with three elements.

The arrangement being automatic is so simple that in glancing over the several groups, e. g. the C_8 -groups, it is almost selfevident:

8 I	8 II	8 III	8 IV
C_8H_7	$C_8H_4O_2$	$C_8HO_2Cl_2$	$C_8HO_2NCl_2$
C_8H_8	$C_8H_4O_4$	$C_8HO_2Br_2$	$C_8H_2O_2NCl_2$
C_8H_9	$C_8H_4O_6$	$C_8H_2OCl_4$	$C_8H_2O_2N_2Br_2$
C_8H_{10}	$C_8H_4O_8$	$C_8H_2O_2Cl_2$	$C_8H_2O_2Cl_2Br_2$
C_8H_{11}	$C_8H_4N_2$	$C_8H_2O_2Br_2$	$C_8H_2O_2NCl_2$
C_8H_{12}	$C_8H_4Cl_2$	$C_8H_2O_2Cl_4$	$C_8H_2O_2ClBr$
C_8H_{13}	$C_8H_4Cl_4$	$C_8H_2O_2Cl_2$	$C_8H_2O_2NCl_2$
C_8H_{14}	$C_8H_4Cl_6$	$C_8H_2O_2Br_4$	$C_8H_2ONCl_2$
C_8H_{15}	$C_8H_4J_2$	$C_8H_2O_2J_2$	$C_8H_2ONCl_2$
	$C_8H_4J_4$	$C_8H_2O_2J_4$	$C_8H_2ON_2Cl_2$
	C_8H_6O	$C_8H_2O_2N_2$	$C_8H_2O_2NCl_2$
	$C_8H_6O_2$	$C_8H_2Cl_2S_2$	$C_8H_2O_2NCl_2$
	$C_8H_6O_4$	$C_8H_2Br_2S_2$	$C_8H_2O_2NBr_2$
	$C_8H_6O_6$	$C_8H_2O_2Cl_2$	$C_8H_2O_2N_2Br_2$
	$C_8H_6O_8$	$C_8H_2O_2Cl_4$	$C_8H_2O_2N_2S_2$
	$C_8H_6O_{10}$	$C_8H_2O_2N_4$	$C_8H_2O_2Cl_2Br$
	$C_8H_6O_{12}$	$C_8H_2O_2Cl$	$C_8H_2O_2NCl_2$
	$C_8H_6O_{14}$	$C_8H_2O_2Br$	$C_8H_2O_2NBr_2$
	$C_8H_6N_2$	$C_8H_2O_2J$	$C_8H_2O_2N_2Br$
	$C_8H_6N_4$	$C_8H_2O_2Cl_2$	$C_8H_2O_2Cl_2S$
	$C_8H_6Cl_2$	$C_8H_2O_2Br_2$	$C_8H_2O_2NCl_2$
	$C_8H_6Cl_4$	$C_8H_2O_2Br_4$	$C_8H_2O_2NBr_2$
	$C_8H_6Br_2$	$C_8H_2O_2N$	$C_8H_2O_2N_2Br$
	$C_8H_6Br_4$	$C_8H_2Cl_2S_2$	C_8H_2ONCl
	$C_8H_6J_2$	$C_8H_2Br_2S$	C_8H_2ONBr

Als besonders instruktives Beispiel kann die gesammte C_1 -Gruppe angesehen werden; wegen der wenigen Isomeriefälle in dieser Gruppe ist die Folge der sich ablösenden Elemente eine stetige und übersichtliche.

The whole C_1 -group may be regarded as an especially instructive example; on account of the few cases of isomerism which this group embraces, one can see clearly the sequence of the elements which are comprised in that group.

La combinaison $C_{13}H_{17}O_2N$ par exemple, se trouvera dans le groupe „ C_{13} “ avec trois éléments, c'est à dire „13 III“.

L'arrangement est simple et pour ainsi dire automatique, comme le démontre l'exemple suivant du groupe „ C_8 “:

Un composé $C_{13}H_{17}O_2N$ deve, ad esempio, cercarsi nel gruppo C_{13} con tre elementi.

L'ordine è così semplice — perchè automatico — che appare evidente scorrendo collo sguardo i singoli gruppi, ad esempio il gruppo C_8 :

S I	S II	S III	S IV
C_8H_8	$C_8H_8O_2$	$C_8HO_2Cl_2$	$C_8HO_2NCl_2$
C_8H_8	$C_8H_8O_2$	$C_8HO_2Br_2$	$C_8H_8O_2NCl_2$
C_8H_8	$C_8H_8O_2$	$C_8H_8OCl_2$	$C_8H_8O_2N_2Br_2$
C_8H_8	$C_8H_8O_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2Cl_2Br_2$
C_8H_{10}	$C_8H_8N_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2NCl_2$
C_8H_{12}	$C_8H_8Cl_2$	$C_8H_8O_2Br_2$	$C_8H_8O_2ClBr$
C_8H_{14}	$C_8H_8Cl_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2NCl_2$
C_8H_{16}	$C_8H_8Cl_2$	$C_8H_8O_2Br_2$	$C_8H_8ONCl_2$
C_8H_{18}	C_8H_8J	$C_8H_8O_2J_2$	$C_8H_8ONCl_2$
	$C_8H_8J_2$	$C_8H_8O_2J_2$	$C_8H_8ON_2Cl_2$
	C_8H_8O	$C_8H_8O_2N_2$	$C_8H_8O_2NCl_2$
	$C_8H_8O_2$	$C_8H_8Cl_2S_2$	$C_8H_8O_2NCl_2$
	$C_8H_8O_2$	$C_8H_8Br_2S_2$	$C_8H_8O_2NBr_2$
	$C_8H_8O_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2N_2Br_2$
	$C_8H_8O_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2N_2S_2$
	$C_8H_8O_2$	$C_8H_8O_2N_2$	$C_8H_8O_2Cl_2Br_2$
	$C_8H_8O_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2NCl_2$
	$C_8H_8O_2$	$C_8H_8O_2Br_2$	$C_8H_8O_2NBr_2$
	$C_8H_8N_2$	$C_8H_8O_2J_2$	$C_8H_8O_2N_2Br_2$
	$C_8H_8N_2$	$C_8H_8O_2Cl_2$	$C_8H_8O_2Cl_2S_2$
	$C_8H_8Cl_2$	$C_8H_8O_2Br_2$	$C_8H_8O_2NCl_2$
	$C_8H_8Cl_2$	$C_8H_8O_2Br_2$	$C_8H_8O_2NBr_2$
	$C_8H_8Br_2$	$C_8H_8O_2N$	$C_8H_8O_2N_2Br_2$
	$C_8H_8Br_2$	$C_8H_8Cl_2S_2$	$C_8H_8ONCl_2$
	$C_8H_8J_2$	$C_8H_8Br_2S_2$	$C_8H_8ONBr_2$

On peut regarder comme exemple particulièrement instructif le groupe „ C_1 “. Par suite du petit nombre d'isoméries que présente ce groupe, l'ordre des différents éléments est continu et facile à saisir.

Come esempio particolarmente istruttivo può essere considerato l'intero gruppo C_1 in cui, per i pochi casi di isomeria, l'ordine nel quale si susseguono i singoli elementi non è interrotto, ed è chiaramente visibile.

Bemerkungen.

1) Ableitung der Bruttoformel. Das den Tabellen sich anschliessende Namenregister (mit Formelangabe) dient zur Ableitung der Formel in allen Fällen, wenn, in Ermangelung einer Strukturformel, die Bruttoformel der Stammsubstanz dem Gedächtniss nicht gegenwärtig ist.

Um beispielsweise zu den Bruttoformeln der Tarkoninderivate zu gelangen, schlägt man zunächst im Namenregister Tarkonin = $C_{11}H_9O_3N$ auf, und ist nun im Stande, in den eigentlichen Tabellen sich über $C_{11}H_8O_3NBr$ Bromtarkonin bzw. andere Tarkoninderivate zu orientieren.

2) Erklärung und Bedeutung der Beilsteinnotiz. Bei jeder Verbindung findet sich am Schluss, ausserhalb der Literaturklammer, eine aus römischen und arabischen Ziffern combinirte Zahlennotiz, vom Verfasser „Beilsteinnotiz“ genannt, z. B. bei:

$C_9H_{10}O_3$ Melilotsäure die Notiz II, 1562. Dieselbe bezieht sich stets auf die dritte Auflage des Handbuches der organischen Chemie von Beilstein und soll anzeigen, dass die Melilotsäure in Band II, Seite 1562 dieses Handbuches zu finden ist.

Das Lexikon bildet gleichzeitig somit für das Handbuch von Beilstein ein Generalregister par excellence, denn sämtliche im „Beilstein“ aufgeführten Verbindungen, etwa 57,000 Stück, sind berücksichtigt worden.

Das Fehlen dieser Beilsteinnotiz bei etwa 8000 Verbindungen weist stets darauf hin, dass dieselben aussergewöhnlichen Literaturquellen entnommen sind oder der neueren Literatur angehören, welche erst in den demnächst kommenden Supplementbänden zum Beilstein'schen Handbuch behandelt werden kann.

3) Jede Verbindung nimmt in den Tabellen nur einen und zwar ihren systemgemäss feststehenden Platz ein, mit Ausnahme der Salze, welche bei

Remarks.

1) *Deduction of the empirical formula.* The index of names (with their formulae) which accompanies the tables will enable the reader to deduce the formula even if he is at a loss to record the empirical formula of the mother-substance.

To ascertain for instance, the empirical formula of the derivatives of tarconine one refers in the index of names to tarconine = $C_{11}H_9O_3N$, and thus one is able to obtain in the tables information about $C_{11}H_8O_3NBr$, bromtarconine or other derivatives of tarconine.

2) *Explanation and importance of the reference to "Beilstein".* To every compound are affixed two figures, one in roman, the other in arabic numerals; e. g.:

$C_9H_{10}O_3$, Meliloticacid carries the figures II, 1562. These refer always to the third edition of Beilstein's handbook of organic chemistry, and are meant to indicate that melilotic acid is described there in Vol. II, p. 1562.

The lexicon is therefore at the same time a collective index par excellence to "Beilstein", for all the compounds which are registered there — about 57,000 — have been dealt with.

The references to "Beilstein" are not to be found after about 8000 compounds, and this fact indicates that they either have been described in obscure papers or that they occur in the recent literature which has to be treated in the supplementary volumes to "Beilstein".

3) Every compound has in the table only one place which is fixed by the system, with the exception of the salts which are placed with the compounds

Observations.

1) *Détermination de la formule brute.* Le registre des noms accompagnés des formules, qui suit les tables, sert à s'orienter en cas d'oubli de la formule brute, la formule de structure étant inconnue.

Pour établir par exemple la formule brute des dérivés de la Tarconine, on cherche le mot Tarconine = $C_{11}H_9O_3N$, on trouvera alors facilement dans les tables $C_{11}H_9O_3NBr$, bromotarconine ou d'autres dérivés de la même substance.

2) *Explication et signification de la „Beilstein-Notiz“.* On trouve pour chaque corps, à la suite de la parenthèse bibliographique, une annotation en chiffres romains et arabes que j'appelle „Beilstein-Notiz“ (Annotation qui renvoie au traité de Beilstein). Par exemple: à l'article $C_9H_{10}O_3$ Melilotsäure, la note II, 1562. Elle se rapporte, comme toutes les autres à la troisième édition de la Chimie organique de Beilstein et signifie que dans ce traité, on trouvera l'acide mélilotique à la page 1562 du II^{me} volume.

Le dictionnaire représente en même temps la table des matières par excellence du traité de Beilstein, car il contient l'ensemble de combinaisons qui sont décrites dans celui-ci et qui s'élèvent au chiffre de 57,000 approximativement.

La „Beilstein-Notiz“ fait défaut pour 8000 corps environ provenant de sources bibliographiques spéciales ou de publications récentes qui ne seront contenues que dans les fascicules supplémentaires du traité de Beilstein.

3) Chaque combinaison se trouve dans les tables à une place unique conformément à l'arrangement choisi, sauf les sels qui sont joints aux substances

Avvertenze.

1) *Deduzione della formola bruta* L'indice dei nomi annesso alle tabelle (coll' indicazione delle formole) serve per quei casi nei quali, mancando una formola di struttura, non si abbia presente alla memoria la formola bruta della sostanza madre.

Per avere, ad esempio, la formola bruta di derivati della tarconina si trova prima nell' indice dei nomi: tarconina = $C_{11}H_9O_3N$, e si può allora dirigersi nelle relativa tabella alla ricerca del corpo $C_{11}H_9O_3NBr$, o bromotarconina, e così di seguito per gli altri derivati.

2) *Spiegazioni intorno al „richiamo al Beilstein“ e sua importanza.* Per ogni composto dopo la bibliografia che lo concerne, la quale è posta fra parentesi, vi è una citazione espressa in numeri arabi e romani che l'autore chiama „richiamo al Beilstein“; così ad es. per: $C_9H_{10}O_3$ Acido melilotico la citazione II, 1562. Questa si riferisce sempre alla terza edizione del manuale di chimica organica del Beilstein, e sta ad indicare che l'acido melilotico si trova in questo manuale a pagina 1562 del secondo volume.

E così che il Dizionario costituisce nello stesso tempo l'indice generale per eccellenza del manuale del Beilstein, perchè contiene tutte le 57,000 sostanze in quello descritte.

La mancanza del richiamo al Beilstein per circa 8000 composti proviene da ciò, che essi sono tolti da fonti bibliografiche non comuni, o appartengono a pubblicazioni recenti, che potranno esser prese in considerazione soltanto nei prossimi supplementi del manuale del Beilstein.

3) Ogni composto ha nelle tabelle un solo posto o cioè quello che gli compete in ragione del sistema, fatta eccezione pei sali, che sono messi presso la loro

den betreffenden Stammverbindungen aufgeführt sind. Die Chloride, Bromide, Jodide und Cyanide quaternärer Ammoniumbasen dagegen sind als selbständige Individuen registriert.

4) Polymere Verbindungen, deren Molekulargewichte sicher festgestellt sind, sind unter der Gesamtformel zu suchen, z. B.:

$(\text{CHON})_3$ Cyanursäure unter $\text{C}_3\text{H}_3\text{O}_3\text{N}_3$.

5) Von den Literaturquellen sind sowohl diejenigen angegeben, welche auf Darstellung und Eigenschaften der betreffenden Verbindung Bezug haben, wie auch solche, welche näherliegende Zersetzungen und Umsetzungen behandeln. Abhandlungen rein theoretischen, analytischen, physikalischen, mathematischen, kristallographischen und medizinisch-physiologischen Inhalts sind nicht berücksichtigt worden.

6) Die Namen der Autoren sind fortgelassen, um die nothwendige Kürze zu erzielen.

7) Die Literatur ist vollständig bearbeitet bis Schluss 1898 und von 1899 die des ersten Quartals.

8) Seitens der Verlagsfirma ist beabsichtigt, jährliche Ergänzungshefte zu dieser zweiten Auflage herauszugeben.

9) Als eine unliebsame Arbeitserschwerung habe ich bei zahlreichen Abhandlungen das Fehlen der Bruttoformeln empfunden, und bitte ich daher die Fachgenossen, den Analysenzahlen in Zukunft stets die Bruttoformel beizufügen und diese beim Niederschreiben wie auch beim Correcturlesen auf ihre Richtigkeit zu prüfen.

Die Fachgenossen würden sodann auch im Interesse der Einheitlichkeit handeln, wenn sie die in diesem Lexikon angewandte Anordnung der empirischen Formeln acceptiren wollten, wie dies seitens des Vorstandes der Deutschen chemischen Gesellschaft bekanntlich schon für den Jahrgang 1898 der „*Berichte*“ beschlossen worden ist, so z. B.:

they are derived from. The chlorides, bromides, iodides and cyanides of quaternary ammonium bases, however, are registered as group-substances.

4) Polymeric compounds with fixed molecular weights are registered under their own formulae; e. g.

$(\text{CHON})_3$, cyanuric acid is found under $\text{C}_3\text{H}_3\text{O}_3\text{N}_3$.

5) The work contains the references to the papers which describe the method of preparation and their properties, as well as those which deal with the immediate changes they undergo. No reference is made to purely theoretical papers, nor to those with analytical, physical, mathematical, crystallographic and medico-physiological contents.

6) Authors' names I have omitted for the sake of brevity.

7) The literature is fully treated up to the end of the year 1898, and that of 1899 the first quarter has been dealt with.

8) The publishing firm intends to bring out yearly supplements to this second edition.

9) My work has been made rather heavy on account of the circumstance that empirical formulae had been omitted in numerous papers; I therefore, beg fellow-workers in future to add the empirical formulae to the analytical data and to check them in writing the manuscript as well as in reading the proof

For the sake of uniformity it would recommend itself if workers would adopt the arrangement of the empirical formulae as used in this lexicon, which has been resolved upon by the Council of the German Chemical Society to come into practice in the year 1898 of the „*Berichte*“ the first quarter has been dealt with. Thus one should write:

dont ils dérivent. Les chlorures, bromures, iodures et cyanures des bases d'ammonium quaternaires sont inscrits comme types individuels.

4) Les corps polymères, dont les poids moléculaires sont bien déterminés, doivent être recherchés d'après la formule moléculaire. Par exemple l'acide cyanurique $(\text{CHON})_3$ sera inscrit sous la formule $\text{C}_3\text{H}_3\text{O}_3\text{N}_3$.

5) Les sources bibliographiques indiquées, comprennent aussi bien celles qui traitent de la préparation et des propriétés des combinaisons, que celles où il est question de leurs transformations ou de leurs décompositions. Les publications concernant seulement des sujets de théorie, d'analyse, de physique, de mathématiques, de cristallographie ou de physiologie médicale, ne sont pas mentionnés.

6) Pour la brièveté indispensable de l'ouvrage, les noms d'auteurs ont été supprimés.

7) La bibliographie est complète jusqu'à fin 1898 et pour le premier trimestre de l'année 1899.

8) L'éditeur se propose de publier annuellement des suppléments à cette deuxième édition.

9) De nombreuses publications où les formules brutes faisaient défaut, m'ont causé un supplément de travail désagréable. Je prie donc mes collègues en chimie, d'ajouter régulièrement la formule brute aux résultats d'analyses; d'en vérifier soigneusement, l'exactitude sur le manuscrit et sur l'épreuve d'imprimerie.

Dans un but d'unification, il serait bon que tous les chimistes adoptent pour les formules brutes, l'arrangement employé dans ce dictionnaire comme cela a été fait pour le registre de l'année 1898 des „Berichte“. Il faudrait écrire par exemple:

sostanza madre. I cloruri, bromuri, joduri e cianuri delle basi quaternarie ammoniche, vengono al contrario registrati come corpi a se.

4) I polimeri la formola dei quali è ben accertata vanno ricercati sotto la loro formola complessiva; così ad es: $(\text{CHON})_3$ acido cianurico sotto $\text{C}_3\text{H}_3\text{O}_3\text{N}_3$.

5) Delle citazioni bibliografiche si danno sia quelle che concernono la preparazione e le proprietà dei singoli corpi, come anche quelle che trattano delle più importanti loro decomposizioni e trasformazioni. I lavori di argomento puramente teorico, o analitico; oppure che trattano questioni fisico-matematiche, cristallografiche, o che interessano la medicina e la fisiologia, non vengono presi in considerazione.

6) I nomi degli autori sono ommessi per la necessaria brevità.

7) La letteratura è stata completamente consultata fino alla fine del 1898; del 1899 venne presa in considerazione quella del primo trimestre.

8) La casa editrice ha l'intenzione di pubblicare dei supplementi annuali di questa seconda edizione.

9) Uno spiacevole ostacolo fu da me incontrato in questa compilazione per la mancanza delle formole brute in molti lavori; io prego quindi i cultori della chimica di volere in avvenire aggiungere sempre ai dati analitici la formola bruta, o di controllarne l'esattezza sia nell'estensione della memoria, sia ancora nella correzione delle bozze di stampa.

Sarebbe poi desiderabile che gli autori per uniformità accettassero per le formole empiriche l'ordine adottato in questo dizionario come è stato già fatto, notoriamente, della Società chimica di Berlino per l'annata 1898 dei suoi „Berichte“, e così ad esempio:

10) Der Verfasser richtet an die Fachgenossen ergebenst die dringende Bitte, ihn von Fehlern, Versehen und Versäumnissen zu benachrichtigen. Mittheilungen erreichen den Verfasser unter der Adresse:

„Dr. M. M. Richter,
Director der Actiengesellschaft, Färberei vorm. Ed. Printz,
Karlsruhe (Baden).“

10) The author begs workers to inform him of mistakes and omissions. Communications may be sent to the following address:

Nomenklatur.

Von den mannigfachen Schwierigkeiten, welche sich im Laufe der Bearbeitung dieses Werkes einstellten, war die Frage:

„welche Nomenklatur im Interesse der Einheitlichkeit und Uebersichtlichkeit dem Werke zu Grunde zu legen sei“, zweifellos die schwerwiegendste. Wie heute in weitaus verstärktem Maasse, so lagen auch damals, also vor neun Jahren, als diese Frage zur endgültigen Entscheidung gebracht werden musste, die bekannten Misstände auf diesem Gebiete schon klar zu Tage. Es ist und bleibt bedauerlich, dass auch die in Genf gefassten Beschlüsse keine Aussicht haben, sich allgemeiner Anwendung zu erfreuen.*

Die zahlreichen Regeln, welche das Gebiet der aliphatischen Verbindungen und zwar unvollständig umfassen, der geringe Fortschritt auf den übrigen Gebieten der organischen Chemie, wie vor Allem die den Fachgenossen aufgedrängten Gedankenoperationen bei dieser Nomenklatur lassen keinen Zweifel an der Richtigkeit oben geäußelter Ansicht übrig.

Die Frage nach einer befriedigenden Nomenklatur für dieses Lexikon führte, namentlich in Anbetracht des Fehlens

* Mit Ausnahme der durchaus zweckentsprechenden Nomenklatur der aliphatischen Kohlenwasserstoffe.

Nomenclature.

Of the many difficulties which in writing this work presented themselves the greatest was undoubtedly the question:

“Which nomenclature is to be adopted for the sake of uniformity and clearness.” The unfortunate state of things in this respect had already shown itself nine years ago when this question had to be dealt with, and it is now aggravated. It is and remains deplorable that the resolutions arrived at Geneva have no prospect of being generally adopted.*

The numerous rules which embrace, though incompletely, the group of aliphatic compounds, again the small progress concerning the other parts of organic chemistry, and above all the mental operations which this nomenclature necessitates, do not leave any doubt that the view expressed above is correct.

Taking into consideration that structural formulae had to be omitted in order to save space, the question as to a

* With the exception of the specially appropriate nomenclature of the aliphatic hydrocarbons.

10) L'auteur, prie enfin ses collègues, de bien vouloir lui signaler toutes les fautes ou omissions à l'adresse:

10) L'autore rivolge ai colleghi una viva preghiera perchè gli indichino gli errori, le omissioni, mandandogli le corrispondenze al suo indirizzo:

*„Dr. M. M. Richter,
Director der Actiengesellschaft, Färberei vorm. Ed. Printz,
Karlsruhe (Baden).“*

Nomenclature.

Parmi les nombreuses difficultés qui se présentèrent au moment de l'élaboration de ce travail, la plus importante était sans doute la suivante: quelle nomenclature faut-il adopter dans l'intérêt de l'unité et de la clarté de l'ouvrage?

Lorsque, il y a neuf ans, cette question se présenta, le même inconvénient existait déjà. Il est malheureusement peu probable, que les décisions prises par le congrès de Genève, soient adoptées d'une manière générale.*

Les règles nombreuses qui embrassent imparfaitement le domaine des combinaisons aliphatiques, le peu de progrès réalisé dans les autres parties de la chimie organique, et avant tout, les efforts intellectuels qu'exige l'assimilation de la nouvelle nomenclature, ne laissent pas de doute à cet égard.

Le désir de mettre au service du présent ouvrage une nomenclature rationnelle tout en bannissant, faute de place

Nomenclatura.

Tra le molteplici difficoltà che si incontrarono nel corso della compilazione di questo lavoro la più difficile a risolversi consisteva indubbiamente nella scelta e nell'adozione di una nomenclatura che rispondesse per unità e chiarezza allo scopo dell'opera.

Le sfavorevoli circostanze in questo argomento, le quali sono oggi grandemente cresciute, si presentavano però in modo assai chiaro già nove anni fa, allorchè tale questione doveva ricevere una definitiva risoluzione. Resta poi a deplorarsi che anche le conclusioni del Congresso di Ginevra non abbiano alcuna probabilità di essere generalmente adottate.*

Le numerose regole che riguardano esclusivamente la nomenclatura dei composti alifatici — ed anche questi in modo incompleto —; la piccolissima estensione data finora alla parte riguardante gli altri campi della chimica organica; soprattutto poi il fatto che questa nomenclatura non è di immediata comprensione, stanno a provare la giustezza dell'asserto suesposto.

La questione della scelta di un sistema di nomenclatura soddisfacente pel presente dizionario fu risolta coll'adozione esclusiva

* A l'exception de la nomenclature rationnelle des hydrocarbures aliphatiques.

* Fatta eccezione della nomenclatura degli idrocarburi grassi che realmente risponde allo scopo.

jeglicher Strukturformel, welche der Raumersparniss wegen nicht gegeben werden konnten, schliesslich immer und immer wieder auf das „Princip der Substitution“, welches in folgenden Sätzen kurz zusammengefasst werden soll.

1) Jede Verbindung, deren Constitution sicher festgestellt ist, wird auf die ihr zu Grunde liegende Stammsubstanz, nämlich den Kohlenwasserstoff oder das betreffende wasserstoffärmste Ringsystem wie Benzol, Naphtalin, Pyrrol, Furan, Chinolin u. s. f. zurückgeführt.

2) Diese Stammsubstanz wird bei der Namenbildung der Derivate intakt erhalten und muss stets als solche in den Namen der Derivate figuriren, darf also in keinem Falle eine Umbildung erfahren, wie z. B. Pyrazol in Pyrazolin, Inden in Indanon etc.

3) Hydrirte Stammsubstanzen werden als Di-, Tetra-, Hexa-, Okto-, Dekahydroderivate bezeichnet; also Dihydropyrazol für Pyrazolin, oder Tetrahydropyrazol für Pyrazolidin.

4) Als Namen für die Stammsubstanzen werden benutzt:

- a) für die Kohlenwasserstoffe der aliphatischen Reihe die Namen, wie solche sich aus den Beschlüssen der Genfer Nomenklaturcommission ergeben;
- b) für die aromatischen Kohlenwasserstoffe die bisher gebräuchlichen Namen, wie Benzol, Inden, Naphtalin, Anthracen;

- c) für die O, S, Se, N, P enthaltenden Ringsysteme, die sich diesem Text anschliessenden Formen S. 16, wie solche sich sinngemäss aus der Erweiterung der WIDMANN'schen Vorschläge ergeben.

5) Wie die Bildung der Derivate obiger Stammsubstanzen durch Ersetzung von Wasserstoff durch andere Atome oder Atomgruppen gedacht werden kann, so erfolgt auch die Namenbildung dieser Derivate:

satisfactory nomenclature for this lexicon, compelled me to adopt the „*principle of substitution*“. This may be summarised as follows.

1) Every compound with fixed constitution is referred to the group-substance from which it is derived, namely to the hydrocarbon or to the corresponding cyclic system which contains the smallest number of hydrogen atoms, as benzene, naphthalene, pyrrol, furan, quinoline etc.

2) This group-substance remains intact in naming the derivatives and must always figure as such in the names of the derivatives, an alteration may never take place, as for instance that of pyrazole into pyrazoline or indene into indanone etc.

3) Hydrogenised group-substances are named di-, tetra-, hexa-, octo-, decahydroderivatives. Thus dihydropyrazole stands for pyrazoline, tetrahydropyrazole for pyrazolidine.

4) The following names are used for the group-substances:

- a) for the hydrocarbons of the aliphatic series those which are in concordance with the resolutions of the Geneva nomenclature commission;
- b) for the aromatic hydrocarbons the terms used up to the present, such as benzene, indene, naphthalene, anthracene;

- c) for the ring-systems containing O, S, Se, N, P the forms which are affixed to this text (page 16) and which naturally follow from the expansion of WIDMANN's proposals.

5) As the formation of the derivatives of group-substances may be regarded as taking place by the substitution of hydrogen by other atoms or groups, so are the names derived from those of the group-substances.

les formules de structure, m'a conduit à adopter le *principe de la substitution* que résumant, en quelques lignes, les considérations suivantes:

1) Toute combinaison dont la constitution est connue d'une manière certaine, est ramenée à la substance mère dont elle dérive, c'est-à-dire: à l'hydrocarbure ou au noyau le plus simple, tel que le benzène, la naphthaline, le pyrrol, le furane, la quinoléine etc.

2) Le nom de la substance mère doit figurer régulièrement et sans altération aucune dans l'appellation de chacun de ses dérivés. Il ne sera donc pas possible de transformer la dénomination de pyrazol en celle de pyrazoline, la dénomination d'indène en celle d'indanone etc.

3) Les noms des substances mères hydrogénées sont précédés des préfixes di, tétra, hexa, octo deca, etc. On dira par exemple: Dihydropyrazol au lieu de Pyrazoline, Tétrahydropyrazol au lieu de Pyrazolidine.

4) Les dénominations des substances mères sont choisies de la manière suivante:

a) Pour les hydrocarbures aliphatiques, celles qui ont été arrêtées par le congrès de Genève;

b) Pour les hydrocarbures aromatiques, celles qui ont eu cours jusqu'ici; c'est-à-dire parmi les plus connues, les dénominations de: benzène, indène, naphthaline, anthracène etc.

c) Pour les noyaux renfermant: **O**, **S**, **Se**, **N**, **P**, celles qui correspondent aux types figurant à la fin de ce texte et provenant de l'extension des propositions WIDMANN.

5) La nomenclature des dérivés de ces substances fondamentales, se base sur la substitution de l'hydrogène par des atomes ou des radicaux (résidus):

del „*principio della sostituzione*“, tanto più che si dovettero escludere interamente le formole di costituzione per economia di spazio. Diamo qui riassunte in breve le regole derivanti da questo principio:

1) Ogni composto di costituzione sicuramente stabilita viene riferito alla sostanza fondamentale da cui deriva, idrocarburo o sistema ciclico meno ricco in idrogeno, come benzolo, naftalina, pirrolo, furano, chinolina etc.

2) Il nome di queste sostanze fondamentali viene mantenuto intatto nella formazione dei nomi dei derivati, e deve figurare come tale in essi; non può quindi subire giammai modificazioni del genere p. es. di quella di pirazolo in pirazolina, di indene in indanone etc.

3) Le sostanze fondamentali idrogenate si indicano cogli epiteti: Di-, Tetra-, Esa-, Octo-, Deca-idroderivati; si dira così diidropirazolo invece di pirazolina, e tetraidropirazolo invece di pirazolidina.

4) Come nomi delle sostanze fondamentali si adoperano:

a) per gli idrocarburi della serie alifatica i nomi che si derivano dalle conclusioni del congresso di Ginevra;

b) per gli idrocarburi aromatici, i termini finora in uso, come: benzolo, indene, naftalina, antracene;

c) per sistemi ciclici contenenti **O**, **S**, **Se**, **N**, **P**, le forme che si trovano raccolte a pag. 16, come esse risultano in modo naturale dall'estensione delle proposte di WIDMANN.

5) La formazione dei nomi dei derivati si fa nello stesso modo con cui può ritenersi che avvenga la sostituzione dell'idrogeno del corpo fondamentale con altri atomi o gruppi di atomi; p. esempio:

	Common name	Names to be substituted

Der chemische Ort ist bei offenen Ketten durch griechische Buchstaben und bei Ringsystemen stets durch Ziffern gekennzeichnet.*

Die hierbei innegehaltene Reihenfolge ist aus den auf den folgenden Seiten gegebenen Beispielen zu ersehen.

Zum Aufsuchen der betreffenden Stammsubstanz dient ein den Beispielen direkt sich anschliessendes und etwa 250 Stammformen umfassendes kleines Register.

* Den Beschluss der Genfer Nomenklaturcommission, in jedem Falle Zahlen anzuwenden, halte ich für einen schweren Fehler.

With open-chain compounds the position of the substituent is indicated by the Greek alphabet, and with ring-compounds by numbers.*

The way they succeed each other can be seen from the examples which are given on the following pages.

A small index comprising about 250 group-forms follows the examples and enables one to look for the group-substance.

* I regard it as a great mistake to follow the resolution of the Geneva nomenclature commission in using numbers in every case.

<i>Dénomination commune</i> Nomi usuali		<i>Dénomination par substitution</i> Nomi secondo il principio della sostituzione

Les positions occupées par les substituants sont désignées par des lettres grecques dans les chaînes ouvertes, par des chiffres dans les noyaux.*

Les exemples qui figurent dans les pages suivantes expliqueront le système employé.

En outre un petit index contenant environ 250 substances fondamentales permet de les rechercher.

* Je considère comme irrationnelle la décision prise par le congrès de Genève, d'employer les chiffres dans tous les cas.

Il luogo chimico dei sostituenti è sempre indicato nelle catene aperte con lettere greche, e nei sistemi ciclici con cifre.*

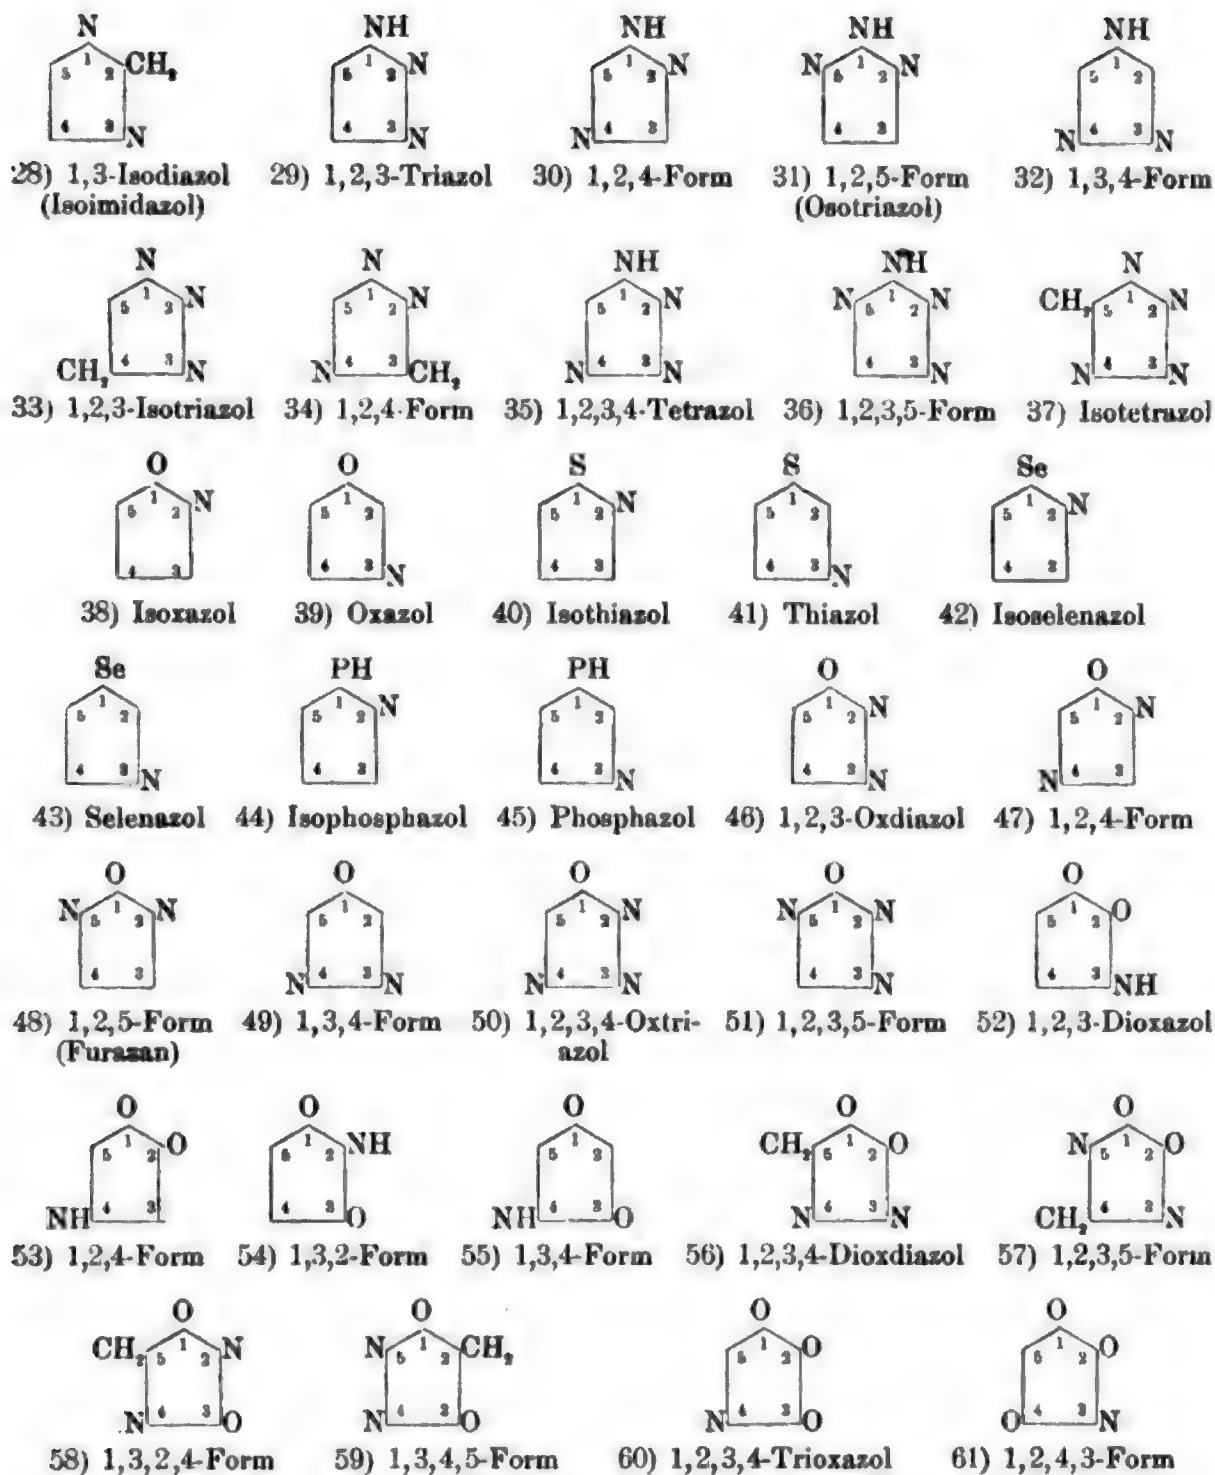

L'ordine da seguirsi in questa indicazione risulta dagli esempi contenuti nelle pagine seguenti.

Per la ricerca delle sostanze fondamentali serve un piccolo registro contenente circa 250 forme semplici, che segue immediatamente gli esempi.

* Io giudico come un grande errore la decisione del Congresso di Ginevra di adoperare numeri in tutti i casi.

Verzeichniss der Verbindungen.

C₁-Gruppe mit einem Element.

CH ₄	C 85,7 — H 14,3 — M. G. 14. 1) Leken = (CH ₄) _n Sm. 79° (B. 16, 1548). — I, 108. 2) Kohlenwasserstoff (aus Bernstein) = (CH ₂) _x . Sm. 85–86°; Sd. über 300° (J. 1847/48, 736). — III, 565. 3) Kohlenwasserstoff = (CH ₂) _n . Sm. 32,5°; Sd. 272–275° (Z. 1870, 126). 4) Kohlenwasserstoff = (CH ₂) _n . Sm. 35°; Sd. 280–300° (A. 7, 155–156).
CH ₂	C 75,0 — H 25,0 — M. G. 18. 1) Methan (Formen, Methylwasserstoff, Sumpfgas). Gas. Sd. —155 bis —160°. Lit. bedeutend. — I, 100. 2) Kohlenwasserstoff (aus Chrysanthemum cinerariaefolium). Sm. 64° (G. 19, 210).
CO	1) Kohlenoxyd . Gas. Sd. —190° bei 760 mm. Lit. bedeutend.
CO ₂	1) Kohlensäure . Hydrat (Bl. 37, 398; C. 1897 [2] 241; B. 31, 2997). Lit. bedeutend. — I, 541.
CN ₄	1) 1,5-Diazo-1,2,3,4-Tetrazol . + Na ₂ O (A. 273, 147). — I, 1496.
CCl ₄	1) Tetrachlormethan (Tetrachlorkohlenstoff). Sd. 76,7°. Hydrat (C. 1897 [2] 243). 2H ₂ S + 23H ₂ O (A. ch. [5] 28, 19). Lit. bedeutend. — I, 145.
CBr ₄	1) Tetrabrommethan . Sm. 92,5°; Sd. 189,5° (A. 156, 60; 167, 174; 172, 176; 240, 238; Z. 1870, 441; 1871, 432; B. 4, 370; 11, 2239; 15, 766; 27 [2] 396; J. r. 13, 286; Bl. [3] 19, 263; Soc. 65, 262). — I, 166.
CJ ₄	1) Tetraiodmethan (A. 172, 173; 231, 264; B. 24 [2] 733; 27 [2] 396; J. r. 6, 109). — I, 190.
CF ₄	1) Tetrafluormethan (B. 23 [2] 272, 426; Bl. [3] 7, 23). — I, 141.
CS	1) Kohlenstoffmonosulfid (B. 8, 982; Z. 1868, 622, 623; J. pr. [2] 51, 346; B. 30, 138). — I, 881.
CS ₂	1) Dithiomethan (Schwefelkohlenstoff). Sd. 46–47°. Hydrat (C. 1897 [2] 242). Lit. bedeutend. Hydrat = 2CS ₂ + H ₂ O (J. 1856, 293; Z. 1867, 476; B. 3, 80; Am. 5, 19). — I, 878.
CB ₂	1) Borkohlenstoff (Bl. [3] 11, 998).
CCr ₂	1) Kohlenstoffchrom (Bl. [3] 11, 1016).
CFe ₂	1) Kohlenstoffeisen (B. 28 [2] 49; 29, 2991; Soc. 65, 788; C. 1896 [2] 862; Am. 18, 836; Bl. [3] 17, 540).
CMn ₂	1) Kohlenstoffmangan (Bl. [3] 15, 1266).
CMo ₂	1) Kohlenstoffmolybdän (Bl. [3] 19, 872).
CSe ₂	1) Diselenomethan (Selenkohlenstoff) (A. 152, 199). — I, 905.
CSi	1) Siliciumkohlenstoff (B. 25 [2] 498; Bl. [3] 11, 995; C. 1896 [2] 1081).
CTi	1) Kohlenstofftitan (C. 1895 [1] 595; B. 28 [2] 595; Bl. [3] 19, 873).
CVa	1) Kohlenstoffvanadium (Bl. [3] 15, 1280).
CW	1) Kohlenstoffwolfram (Bl. [3] 19, 937).
CW ₂	1) Kohlenstoffwolfram (C. 1896 [2] 416; Bl. [3] 19, 873).
CZr	1) Kohlenstoffzirkonium (Bl. [3] 15, 1278).

C₁-Gruppe mit zwei Elementen.

CHN	C 44,4 — H 3,7 — N 51,9 — M. G. 27. 1) Cyanwasserstoff (Nitril d. Ameisensäure; Blausäure). Sm. —14°; Sd. 26,1°. 2 + Al ₂ Cl ₆ , 4 + Al ₂ Cl ₆ , + Cu ₂ Cl ₂ + 2H ₂ O. Lit. bedeutend. — I, 1409.

 1) 5-Diazo-1,2,3,4-Tetrazolimid (Tetrazylazoimid). Ag, + NH₃ (A. 287, 238). — IV, 1333.
- CHCl₃ 1) Trichlormethan (Chloroform). Sm. —70°; Sd. 61,2°. Lit. bedeutend. + Aceton (B. 14, 2451); Hydrat = +18H₂O. Sm. 1,6° (Fr. 25, 118); + 21H₂S + 23H₂O (A. ch. [5] 28, 12; J. 1852, 560). — I, 144.
- CHBr₃ 1) Tribrommethan (Bromoform). Sm. 7,6°; Sd. 151,2° (A. 3, 295; 16, 165; 64, 352; 95, 211; 194, 23; B. 10, 193; C. r. 94, 42; J. 1887, 741; Soc. 37, 201; 45, 533; J. r. 23, 255). — I, 166.
- CHI₃ 1) Trijodmethan (Jodoform). Sm. 119°. Lit. bedeutend. — I, 182.
- CHF₃ 1) Trifluormethan (Fluoroform). Gas, bei 20° u. 40 Atm. flüssig (B. 23 [2] 377; Bl. [3] 7, 24). — I, 141.
- CH₂O C 40,0 — H 6,7 — O 53,3 — M. G. 30
 1) Aldehyd d. Ameisensäure (Formaldehyd). Sd. —21°. + NaHSO₃, + KHSO₃. Lit. bedeutend. — I, 910.
- CH₂O₂ C 26,1 — H 4,3 — O 69,6 — M. G. 46
 1) Ameisensäure. Sm. 8,6°; Sd. 100,8°. Salze u. Ester meist bekannt. Lit. bedeutend. — I, 392.
- CH₂O₃ C 19,4 — H 3,2 — O 77,4 — M. G. 62

- CH₃N, C 28,5 — H 4,8 — N 66,7 — M. G. 42
 1) Cyanamid. Sm. 40°. Ag. Lit. bedeutend. — I, 1435.
 2) Diazomethan. Gas (B. 27, 1888; 28, 855, 1624, 1682).
- CH₃N₂ C 17,1 — H 2,9 — N 80,0 — M. G. 70
 1) 1,2,3,5-Tetrazol. Sm. 156°. Subl. Na + H₂O, Ba + 3H₂O, Ag (B. 25, 1412; 28, 1693; 31, 950; A. 287, 243, 247). — IV, 1231.
- CH₂Cl₂ 1) Dichlormethan (Methylenchlorid). Sd. 41,6°. Hydrat (C. 1897 [2] 242). + 21H₂S + 23H₂O (A. ch. [5] 28, 17). (A. 33, 328; 111, 251; 240, 204, 231; Z. 1868, 714; 1869, 276; Soc. 37, 195; J. 1879, 490; 1886, 627; Bl. 36, 68). — I, 144.
- CH₂Br₂ 1) Dibrommethan. Sd. 58,5° bei 756 mm (A. 111, 251; 240, 229; B. 6, 558; 7, 507; Soc. 45, 520; A. ch. [5] 30, 268; J. r. 23, 255). — I, 165.
- CH₂J₂ 1) Jodmethan. Sm. 4°; Sd. 180° u. Zers. (A. 115, 267; 120, 356; Z. 1868, 713; J. r. 19, 454; A. ch. [3] 53, 313; B. 4, 479; 5, 1095; 27, 1890; J. pr. [2] 31, 505). — I, 182.
- CH₂F₂ 1) Difluormethan (Bl. [3] 7, 24; B. 23 [2] 461). — I, 141.
- CH₂S 1) polym. Aldehyd d. Thioameisensäure = (CH₂S)_n. Sm. 175—176° (B. 19, 2345). — I, 913.
- CH₃S₂ 1) Merkaptodithioameisensäure (Trithiokohlensäure). Fl. Na, K, Ca (A. 123, 67; J. 1871, 262; A. ch. [5] 22, 544). — I, 887.
- CH₃N₃ C 14,1 — H 3,5 — N 82,3 — M. G. 85
 1) 5-Amido-1,2,3,4-Tetrazol + H₂O (Amidotetrazotsäure). Sm. 203°. Na + 3H₂O, Ba + 5H₂O, Ag, HCl + H₂O, Cyanurat (A. 270, 54; 273, 144; 287, 233, 249 Anm.; B. 31, 950; Ph. Ch. 23, 411, 414). — I, 1496; IV, 1312.
- CH₃Cl 1) Chlormethan (Methylchlorid). Sd. —23,7° (—21°); Hydrat (C. 1897 [2] 242). (J. 1878, 1135; 1881, 376; A. 15, 17; 174, 378; A. ch. [3] 52, 97; [6] 15, 517; Bl. 31, 11; 51, 39). — I, 144.
- CH₃Br 1) Brommethan. Sd. —4,5° bei 757,6 mm. Hydrat + 20H₂O (A. 46, 44; 56, 146; J. pr. [2] 18, 293). — I, 165.
- CH₃J 1) Jodmethan. Sd. 42,8°. Hydrat + 2H₂O. Sm. —4° (J. 1880, 472; C. 1897 [2] 242). + 2H₂S + 23H₂O (A. ch. [5] 28, 21). (A. 15, 30; 56, 147; 177, 272; 196, 350; 243, 23; J. pr. [2] 31, 500; M. 2, 644; A. ch. [5] 16, 596). — I, 182.

- CH₃N₂ C 20,3 — H 8,5 — N 71,2 — M. G. 59.
- 1) Diamidoimidomethan (Guanidin; Carbamidin). Salze meist bek. Lit. bedeutend. — I, 1161.
- CH₃P 1) Methylphosphin. Sd. —14° bei 758,5 mm. HCl, HJ (B. 4, 605, 608; 6, 302. — I, 1498.
- CH₃N₃ C 26,1 — H 13,0 — N 60,9 — M. G. 46.
- 1) Methylhydrazin. Sd. 87° bei 745°. H₂SO₄, Oxalat, Pikrat (A. 253, 7; B. 27, 700; 28, 859; 29, 962; 31, 61). — I, 1148.
- CH₃N₄ C 16,2 — H 8,1 — N 75,7 — M. G. 74.
- 1) Amidoguanidin. HCl, (2HCl, PtCl₄), H₂SO₄ + 2H₂O, HNO₃, Pikrat, Cu + 2HNO₃, Cu + H₂SO₄, Bicarbonat (A. 270, 22; 302, 332; G. 24 [1] 453). — I, 1166.
- CON₂ 1) Carbazid (Stickstoffkohlenoxyd) (B. 27, 2684; J. pr. [2] 52, 472).
- COCl₂ 1) Carbonylchlorid (Chlorkohlenoxyd; Phosgen). Sd. 8,2°. Lit. bedeutend. — I, 546.
- COBr₂ 1) Bromkohlenoxyd. Sd. 63—66° (B. 13, 873; Bl. [3] 13, 444). — I, 546.
- COS 1) Ketothiomethan (Kohlenoxydsulfid). Gas, flüssig bei 0° u. 12,5 Atm. Lit. bedeutend. — I, 877.
- COK 1) Hexaoxybenzolkalium, siehe Hexaoxybenzol C₆H₆O₆. — II, 1040.
- COSi 1) Siliciumcarboxyd (B. 14, 2060; 25 [2] 499).
- CO₂Si 1) Kohlenstoffsiliciumverbindung (B. 15, 1442).
- CO₂N₄ 1) Tetranitromethan (Tetranitrokohlenstoff). Sm. 13°; Sd. 126° (A. 119, 247). — I, 203.
- CNCl 1) Chloreyan. Sd. 15,5°. + BCl₃, + SbCl₅, + TiCl₄. Lit. bedeutend. — I, 1433.
- CNBr 1) Bromcyan. Sm. 52°; Sd. 61,3° bei 750 mm (Berz. J. 8, 94; 19, 195; A. Spl. 1, 384; J. 1871, 80; R. 4, 151; 5, 65; B. 29, 1822, 2078). — I, 1434.
- CNJ 1) Jodecyan. Sm. 164,5°. Lit. bedeutend. — I, 1434.
- CN₂S₂ 1) Thiotritiazylrhodanid (B. 30, 631).
- CClBr₃ 1) Chlortribrommethan. Sm. 55°; Sd. bei 160° (B. 25 [2] 188).
- CCl₂Br₂ 1) Dichlordibrommethan. Sm. 22°; Sd. 135° (150,2°) (A. 240, 208; B. 25 [2] 188). — I, 166.
- CCl₂J₂ 1) Dichlordijodmethan. Sm. 85° u. Zers. (A. 240, 233). — I, 190.
- CCl₂S 1) Dichlorthiomethan (Chlorschwefelkohlenstoff; Thiophosgen). Sd. 73,5° (A. 45, 45; 167, 204—205; J. 1887, 2545; Z. 1871, 418; B. 20, 2380; 21, 102, 339, 2541; Soc. 51, 270). — I, 882.
- CCl₂S₂ 1) Chlorthiocarbonyl + Schwefelchlorid. Flüssig (B. 20, 2381). — I, 882.
- CCl₂Br 1) Trichlorbrommethan. Sm. —21°; Sd. 104,3° (Z. 1869, 624; J. 1871, 259; Bl. 17, 538; B. 10, 678; 25 [2] 188; Soc. 37, 203). 2H₂S + 23H₂O (A. ch. [5] 28, 22). — I, 166.
- CCl₂J 1) Trichlorjodmethan. Sd. 142° (B. 26 [2] 6).
- CCl₂F 1) Trichlorfluormethan. Sd. 24,9° (B. 26 [2] 292, 782).

 $C_4H_{12}O_2Si$ 1) Siliciumdiäthyläther. Sd. 155,8° (A. 164, 307).
 C_4OCl_2Br 1) Trichlorbromfuran. Sm. 75—76°. — III, 691.
 $C_4OCl_2Br_4$ 1) Hexachlortetrabromäthyläther? Sm. 96° (A. ch. [3] 16, 25). — I, 301.
 $C_4O_2Cl_2J_2$ 1) Chlorid d. Dijodfumarsäure. Sm. 49° (B. 26, 847).
 C_4O_2ClBr 1) Anhydrid d. Chlorbrommaleinsäure. Sm. 113°; Sd. 203° (B. 29 [2] 186).
 $C_4O_2N_2Br_2$ 1) 3,4-Dibrom-2,5-Dinitrofuran. Sm. 151—152°. + C₆H₆ (Am. 10, 391). — III, 691.
 $C_4O_2Br_2S_2$ 1) Anhydrid d. 2,5-Dibromthiophen-3,4-Disulfonsäure. Sm. oberh. 200° (B. 17, 1569). — III, 743.
 $C_4N_2S_2Si$ 1) Rhodansilicium. Sm. 142°; Sd. bei 300° (A. ch. [5] 11, 343). — I, 1521.

C₄-Gruppe mit vier Elementen.

- C_4HONCl_4 1) 3,4,5,5-Tetrachlor-2-Keto-2,5-Dihydropyrrol (Dichlormaleïnimidchlorid). Sm. 147—148° (A. 295, 79).
 $C_4HO_2NCl_2$ 1) Mucochlorsäureoximanhydrid. Sm. 76—77° (Am. 19, 657).
 2) Imid d. Dichlormaleinsäure. Sm. 179° (Ag, NH₃) (B. 16, 2393; Am. 18, 334). — I, 1390.
 $C_4HO_2NCl_4$ 1) Perchloreyanpropionsäure. Sm. 200°. NH₄ (A. ch. [3] 16, 72). — I, 1219.
 $C_4HO_2NBr_2$ 1) Mucobromsäureoximanhydrid. Sm. 117—118° (125°) (Am. 16, 299; B. 32, 536).
 2) Imid d. Dibrommaleinsäure. Sm. 225° (218°). Ag (J. 1877, 706; 1882, 368; B. 17, 556, 1745; 20, 2598; Am. 16, 301; 18, 335). — I, 1390.
 C_4HO_2ClBr 1) $\alpha\gamma$ -Lakton d. α [?]-Chlor- β -[?]-Brom- γ -Oxypropen- α -Carbonsäure. Sm. 36° (Am. 16, 285).
 $C_4HO_2Br_3S_2$ 1) 2,3,5-Tribromthiophen-4-Sulfonsäure. Ba + H₂O (B. 18, 1775). — III, 743.
 $C_4HO_2N_2Br_2$ 1) 3,4-Dibrom-2,5-Dinitropyrrol + H₂O. Sm. 169° u. Zers. (B. 20, 2597, 2600). — IV, 65.
 $C_4H_2ON_2Cl_4$ 1) Amid d. Perchloreyanpropionsäure. Sm. 86—87° (A. ch. [3] 16, 72). — I, 1219.
 $C_4H_2ON_2Br_2$ 1) 4,5-Dibrom-3-Keto-2,3-Dihydro-1,2-Diazin. Sm. 224°. Ba + 1½ H₂O (B. 32, 535).
 $C_4H_2OCl_4Br_2$ 1) Verbindung (aus Dichloressigsäurealdehyd). Sm. 60° (Z. 1869, 393). — I, 928.
 $C_4H_2O_2NCl$ 1) Oximanhydrid d. α [oder β]-Chlor- γ -Oximidopropen- α -Carbonsäure (O. d. Chlormaleinsäurealldoxim). Sm. 58° (Am. 19, 666).
 2) Imid d. Chlormaleinsäure. Sm. 131° (B. 16, 2394; 17, 553). — I, 1390.
 $C_4H_2O_2NBr$ 1) Oximanhydrid d. α [oder β]-Brom- γ -Oximidopropen- α -Carbonsäure (O. d. Brommaleinsäurealldoxim). Sm. 82—83° (Am. 19, 657).
 2) Imid d. Brommaleinsäure. Sm. 150,5° (J. 1877, 706; B. 17, 557; Am. 19, 658). — I, 1390.
 $C_4H_2O_2NBr_3$ 1) Amid d. $\alpha\alpha\gamma\gamma\gamma$ -Pentabrom- β -Ketopropan- α -Carbonsäure (A. d. Tribromacetyldibromessigsäure). Sm. 148° (B. 19, 2698). — I, 1348.

- $C_4H_2O_2NJ_3$ 1) Verbindung (aus Acetylen) (A. 135, 261).
 $C_4H_2O_2N_2Cl_2$ 1) Verbindung (aus Chloralhydrat) (B. 8, 1328; 9, 1255). — I, 1266.
 $C_4H_2O_2N_2Br_2$ 1) 2,5-Diketo-4-Dibrommethyl-2,5-Dihydroimidazol (Dibrompyruvinureid). Zers. über 280° (A. 239, 187). — I, 1345.
 $C_4H_2O_2N_3Cl_3$ 1) 4,6-Dioxy-2-Trichlormethyl-1,3,5-Triazin. Sm. 152–153° (J. pr. 2 46, 145). — I, 1456.
 $C_4H_2O_2ClIJ$ 1) $\alpha\gamma$ -Lakton d. β -Chlor- α -Jod- γ -Oxypropen- α -Carbonsäure. Sm. 108 bis 109° (Am. 16, 288).
 $C_4H_2O_2Cl_3Br_2$ 1) Chlorid d. $\alpha\beta$ -Dibrombernsteinsäure. Sd. 218–220° u. Zers. (A. Spl. 2, 86; A. 117, 130). — I, 652.
 $C_4H_2O_2BrJ$ 1) $\alpha\gamma$ -Lakton d. β -Brom- α -Jod- γ -Oxypropen- α -Carbonsäure. Sm. 119 bis 120° (Am. 16, 209).
 $C_4H_2O_2NCl_5$ 1) Pentachloräthylester d. Oxaminsäure. Sm. 134° (A. 37, 69, 71; 56, 284). — I, 1362.
 $C_4H_2O_2N_2Cl_2$ 1) 5,5-Dichlor-2,4,6-Triketohexahydro-1,3-Diazin (Dichlorbarbitursäure) (A. 236, 64). — I, 1373.
 $C_4H_2O_2N_2Br_2$ 1) 5,5-Dibrom-2,4,6-Triketohexahydro-1,3-Diazin (Dibrombarbitursäure) (A. 127, 229; 130, 131; 236, 62; B. 16, 1057). — I, 1373.
 $C_4H_2O_2ClBr$ 1) Chlormucobromsäure. Sm. 122–123°. — I, 616.
 $C_4H_2O_2Br_2S_2$ 1) Anhydrid d. s-Chlorbrombernsteinsäure. Sm. 78° (B. 30, 2887).
 $C_4H_2O_2Br_2S_2$ 1) 2,5-Dibromthiophen-3-Sulfonsäure. Pb + $5\frac{1}{2}H_2O$ (B. 17, 1566). — III, 743.
 $C_4H_2O_2Br_2S_2$ 2) 2-Dibromthiophen-2-Sulfonsäure. Ba (B. 27, 2837). — III, 743.
